DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I Figures 1-7 and claims 1-8 in the reply filed on November 20, 2006 is acknowledged. Claims 9-12 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

3. Figure 11 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 3682

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Lee (US 5,944,628).

Lee discloses a power transmission equipped with a continuously variable ratio-change mechanism and a fixed ratio rotational transmission mechanism (see Fig 1), which transmit a rotational driving force of an input shaft (18) rotationally driven by a drive source (2) to an output shaft (94) with a speed ratio change (see Fig 1); wherein: said continuously variable ratio-change mechanism transmits a rotation from said input shaft (26) to a middle shaft (90) at a continuously variable speed change ratio (see Fig 1); and said fixed ratio rotational transmission mechanism comprises a first rotational transmission gear train (42, 86, 82), a second rotational transmission gear train (80, 92, 94) and a third rotational transmission gear train (reverse 42, 86, 82, 92, 94), said first rotational transmission gear train transmitting the rotation of said input shaft to said middle shaft (42-82), said second rotational transmission gear train transmitting the rotation of said middle shaft to said output shaft (80-94), and said third rotational transmission gear train transmitting the rotation of said input shaft to said output shaft (reverse 42, 86, 82, 92, 94) .

Allowable Subject Matter

6. Claims 2-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
